

## BOOKMARK FACT SHEET

### New Items Slider In Webopac

October 2019

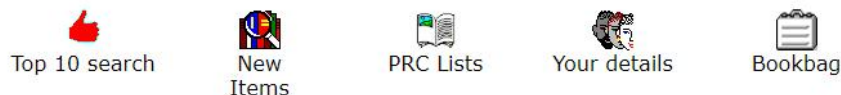

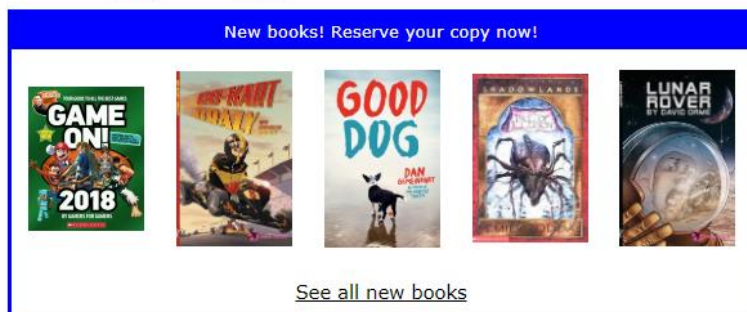

Bookmark's Webopac contains a gadget that can display 5 rotating book cover images.

 Author  Series

The images can be from the New Items list or from a special list called "Hot Items".

After a short delay, the images rotate to the left. This is technically known as a "slider".

By default the covers slider gadget is inactive. To activate, go to Controls then Webopac controls. Click on the "New items" tab at the top.

The top three buttons are used to set up a New Items list or a Hot Items list.

Automatic can set new items based on a time – e.g. items catalogued the last 90 days. The items can be restricted to specific item types, locations and/or status types.

Manual allows entering a set of barcodes. This takes precedence over the automatic settings. Entering barcodes cancels automatic. Only the items entered are listed in New Items.

Special is used to create a separate "hot list" of titles. Any barcodes entered here are displayed in the covers slider gadget in Webopac. The New Items list is not shown. The New Items list is still available, however, by clicking on the New Items icon.

Clicking on the image of any cover brings up the details about that particular item.

- The control allows changing the heading that appears at the top of the gadget.
- The colour of the border and the colour of the text in the top bar can be changed from their default white-on-blue.
- The time delay between "slides" is set to 2000 milliseconds. 1000 ms = 1 sec, so 2000 is 2 seconds. The value here can be changed.

Once set up, click on Update.
