Introduction

Bookmark's Search module allows users to easily search the library catalogue from a Windows program.

Webopac provides the same search functionality but does so online.

Standard Search is *Windows-based*. This means it can only be used on computers that have the Windows operating system. It is accessed by clicking on an icon or from the Search button on the Main Menu of Bookmark itself. Computer tablets that use Windows 8 or 10 can use the Standard Search if an icon has been set up. The *Search manual* describes this program.

Webopac is *Browser-based*. It is an "on-line program" instead of a standard program. It works via a URL like an Internet address. Any browser such as Internet Explorer, Firefox, Chrome or Safari can be used. The Webopac address can be stored in a Favourites (or bookmarks) list or an icon can be created. A link can even be made to it from another page – e.g. a library page. The computer can use any operating system – e.g. Windows or Macintosh or Linux.
OPAC = On-line Public Access Catalogue.

OPAC is an old term that refers to the search program offered by the library management system (LMS). (See https://en.wikipedia.org/wiki/Online_public_access_catalog) Bookmark’s Windows-based Search program is an OPAC.

Webopac is the modern term for an OPAC that operates through Internet browsers.

Webopac offers most of the same set of functions as Standard Search, although it may work slightly differently.

Webopac has several advantages:
- It can be used on any computer on the network regardless of type – e.g. Windows, Macintosh or Linux
- It can be used by android and windows tablets, iPads and even smartphones that can access the network
- An icon is not required
- The URL can be stored in Favourites (bookmarks)
- A link to Webopac can be made from the library's online page
- Or the search entry area can be embedded as part of the library's online page.
Installation

See the fact sheet Webopac Setup Guide for instructions on how to install Webopac.
Webopac Controls

Many options are available for library staff to customize the appearance and behaviour of Webopac, just like for the Windows based Search module.

Webopac Controls is located in Bookmark itself.

Open Bookmark. Click on Controls and enter the password if requested.

Click on Search Controls.

Click on the Update button at the bottom right to save changes.

All changes are automatically saved when the window is closed, even if the Update button is not used.

Update will save changes without closing the window.
Search Setups

Like Circulation and Search, Webopac can have up to 4 different search configurations. This allows customized screens for different types of users.

The lower left corner of the Controls window shows the current Search Setup. Setups are numbered from 0 to 3. Setup 0 is the default. Setups 1, 2 or 3 can be used to create unique configurations – e.g. different presentations, search limiting, etc. Each setup saves settings into a different file.

**To create a different Setup**

Click on the down arrow key to the right of Default setup. Select the number of the setup. Adjust settings and save via Update as normal.

Setups 1, 2 and 3 generate special pages. The URL used to launch is slightly different to the normal URL. See the Webopac Setup Guide for information about the URL.

**Menu style**

Four styles of the search page are available:

**Presentation 1 - Large button menu style**

With this style, clicking on any of the large buttons opens another screen on which to enter a search. These buttons determine which field is to be searched.
**Presentation 2 - Icons menu style**

This screen integrates both the menu and entering a search, thus reducing one layer. This is the default screen for Webopac. The search is typed in then an icon is clicked on to start the search. If enter is pressed, a Keyword search is performed. If an icon is clicked without text, then a page appears for entering a search for that field, just like Presentation 1.

![Presentation 2 - Icons menu style](image)

**Presentation 3 - Frames**

This style breaks the display into three parts: a top banner section, a left menu and the main search entry and results area.

![Presentation 3 - Frames](image)
Presentation 4 – Radio buttons

This style uses "radio buttons" instead of icons to select the search field.

Custom

The custom style allows for making up a special search screen different to the built-in presentations. This screen may have different font sizes and arrangements. It can be an insert for an iframe on your library webpage, so users can enter searches without having to go to another page.

Bookmark will produce a basic start page when Update is pressed. This page can be modified but knowledge of HTML coding is required. See the Custom Screen section at the end.

Visible Buttons

Placing ticks into these boxes determines which icons appear.

Your Details gives borrower information such as items on loan, in history, reserved and in resource lists. This can be password protected for privacy. Removing the tick hides this icon so borrower searches cannot be made.

New items displays a list of items deemed "new" to the collection based on a criteria.
**Bookbag** allows selected items to be collected by multiple searches. The list can be printed or saved or used to create or add to a resource list.

**Resource lists** presents users with pre-defined public lists of items established by teachers or library staff.

**Power Search** allows searching several fields at one time. It can be used when basic searching is insufficient.

**News** is library news, the same as can be displayed in Circulation. It can be edited Controls.

**Help** presents a simple help screen.

**Notes and Contents Searches** adds icons or buttons for searching just those fields.

**Collections** may also appear as **Genres** depending on a setting in General Controls.

### Search menu heading

![Search menu heading](image)

The heading displayed and colours and fonts can be set here.

**Heading** refers to the words that appear above the search entry area. By default this is "Search Library Catalogue". Here, the words can be changed or removed.

**Heading font** sets the font to be used. A limited set of "web safe fonts" are offered. These are Arial, Arial Black, Verdana and Comic Sans MS, which is the default. Use the dropdown list to select.
Choose the font size and style (Regular, Bold, Italic) and click OK.

*Heading colour* is used to set the colour of the heading text.

*Heading image* is the icon that appears left of the heading text. By default it is the Bookmark logo, but another image, such as a school logo graphic, can be used.

*Heading bk colour* is the background colour behind the heading text.

*Heading bk image* can be set to show an image instead of a colour. The image is wallpapered within the heading space. With care, this can be a banner, which can be used instead of a heading image and text.

*Menu bk colour* is the background colour of the area where the search is entered.

*Menu bk image* is an optional background wallpaper that can be used instead of a solid colour. It opens the Images folder at Bookmark's location. Several files beginning with "BKG" are available as backgrounds. You can set your own background by copying the image file to the Images folder then selecting here.

*Main bk colour* is the background colour used outside the search area and also on all subsequent pages.

*Main bk image* is the wallpaper graphic used instead of a solid colour.
Search and List Controls

These settings control the appearance of the search-entry and results screens. The Switches controls can also set some appearances as well.

Default Search type is the default search strategy used by Title, Series, Author and Subjects searches.

Titles listed in Titles can be listed in either Row or Column formats. Unlike the Windows Search module, users cannot change the format.

Row format can display book covers and more information about each title.

Column format shows a summary and one line per title. Up to 30 titles are displayed on a page.

Copies in title list This shows either all copies or only one copy only without listing others. If Include all copies is selected, the status and barcode of each copy is displayed on the right. If not the number of copies and the number available is shown.
In the example above, "The Collector" has 7 copies, all of which are available for loan. Another copy is shown because it has not been linked to the others.

*Show in column title list* only applies to Column format. It determines whether Item Type or Location appears.

**Switches**

A switch is OFF when there is no tick in the checkbox and ON when the tick is present.
Read Book Reviews. If this is is On, users can read any reviews written against items. If it is OFF, Reviews are hidden and not available.

Write Book Reviews. Tick this On to allow users to write reviews. See Reviews Controls in the Controls documentation for more information about how to restrict writing and reading reviews.

Display last borrower in item details. If On, the most recent or current borrower's name appears on the Item Details display. If Off, the name does not appear. There is no ability to display it. It can be displayed using the Windows Search module.

Display empty cover image if no cover. If On, this image is shown if there is no book cover graphic available.

If Off, a blank appears instead.

Include Sublocation as well as Location in titles list. If ticked, the sublocation/site data is included in the Row format along with Location.

Borrower privacy code required in Your Details. If this is ticked, in Your Details Webopac asks for the user's "security code" as well as their barcode. If not ticked, the code is not required, only the barcode. The code is the borrower's individual privacy code or the main password or the borrower privacy password (set in Circulation Controls). Your Details can be completed omitted from Webopac by removing the check next to "Your details" in the Visible Buttons section on the left side of Webopac Controls.

Borrower photo visible in Your Details. If ticked and borrower photos are available they will be displayed in Your Details borrower searches. Not ticked, no photos are shown.

Can make reservations. Ticked adds a Reserve option on the Item Details page. If not ticked users cannot make reservations.
Allow reservations against items with a status of 1. Allows reservations of items that are available for loan. Unticked means a reservation can only be placed if all copies are on loan.

Privacy code required to make a reservation If ticked, the user must enter their privacy code or correct password in order to make a reservation.

To reserve the above item, enter your barcode and password below then click on the Reserve button:
Barcode: 
Privacy Code: 

Bookbag is available. Makes the Bookbag available or not.

Resource list available. Makes accessing Resource Lists from the Bookmark available.

Hide ... Ticking any of the four ‘Hide’ functions hides the user’s ability to limit a search based on that criteria. By default, item type and location are available.

Directly ... If these are ticked then titles are listed immediately from a Series, Subject or Author search without showing the intermediate list.

Display Collection (Genres) instead of Location in titles. Normally the location is included in the list of titles found but ticking this box causes collections to be shown instead.
Include subjects xrefs in key word search. This switch tells Webopac to include See and See Also as part of key word searches.

Display Top 10 Search button. This causes the Top 10 button to be displayed at the bottom.

Enable linking to PDFs. If ticked, PDF documents can be linked. Some Internet browsers can display these, others cannot.

Show full barcode. If ticked, the full barcode is shown against items rather than just the item number.

Passwords

<table>
<thead>
<tr>
<th>Passwords</th>
</tr>
</thead>
<tbody>
<tr>
<td>Borrower info:</td>
</tr>
<tr>
<td>Reserve password:</td>
</tr>
</tbody>
</table>

These passwords are used within the Webopac only. Search contains its own.

Borrower info is an alternate password which can be given out on a need-to-know basis for certain staff. It can be used instead of a borrower’s Privacy Code or the Main Password. It only works if the Borrower Privacy in Your Details switch is ticked.

Reserve password is also an alternate password. It is used in conjunction with the Privacy code required to make reservations switch and works similarly to the Borrower info password but for making reservations.

Reservation Limiting

This control is used to restrict the items on which reservations can be placed. It is based on Borrower Type. In the example below, type 5 "Ex LVS Students", are not allowed to reserve.
Search Limiting

Click the Search limiting button to define the available areas for including in the search.
Search limiting automatically hides certain items from search results. There are two ways to do this:

1. Every item has a "Visible in Search" checkbox which is seen in Cataloguing, Add/Edit Items. If it is not ticked, that particular item will not appear in Search results. This can be set in Add/Edit Items or via a Cataloguing Global change.

2. Ticking boxes on the Search Limiting dialog. Items which do not match the ticked Status types, Locations and Item Types are shown. Any ticked are not displayed. Leave blank any areas that can be visible. Clearing an entire list unrestricts that area.
Item type icons

Search displays icons next to items found. These icons denote the Item Type. They are shown next to titles in both the Rows and Columns formats.

Clicking on the *Item type icons* button opens the Item Type dialog, which allows not only assigning icons to item types but also making changes to the Item Type list. Use of this dialog is discussed in the Controls module in Cataloguing Lists, Item Types.

User Links

User links is a list of handy websites library staff can add to the Webopac search screen.

User links appear beneath the last row of icons.

A maximum of 21 are allowed. The links can be to any valid online location.

To create a User Link, click on a number then enter the name that will appear beneath the icon then, next to it, enter the URL. Click on the Image on the left side and select an icon to use for the link.
The icons used for User Links are stored in a folder called Webopac at Bookmark's location. You can add your own icons to that folder. They can be any type of image: bmp, ico, jpg, gif or png. For display, Webopac will automatically resize the image to fit 32 x 32 pixels, the standard size of an icon. Once added to the folder, they will appear in the list and are available for use.

Webserver

The webserver controls are used to set a port number and how the webserver itself opens. The URL is also shown. They are discussed in the Installation and Setup section at the start of this document.
TEST URL

Once the webserver is open and running on the host, the pages can be tested in Webopac Controls by clicking on Test URL.

The webserver must be open on the host computer for this to work.

Test URL uses a custom-made small-scale browser built into Bookmark. It offers only basic controls: go back, go forward, stop, reset. You can type in any URL and click on the blue arrow on the right to access.
Searching

How to enter a search

The exact steps to follow to enter a search depends on the Presentation.

Presentation 1 - Buttons menu:

With style 1 users click on the type (field) of search first – e.g. Key word, Title, etc. The next window is used to enter the search itself.
Presentation 2, 3, 4 and 5:

The other style menus combine the first two screens from the style 1 menu into one screen.

Search words are entered into the white box. Clicking on an icon beneath determine which area is searched. If Enter is pressed, a Key Word search is performed.

The same options are available using either style.

Presentation styles 3, 4 and 5 are similar to 2 but vary in the way fields are selected.
Key Word Searches

Key word searches are the simplest and easiest type of search and they are powerful.

Items are found if the words appear anywhere within the Title, Series, Author, Subjects, Call number, Volume, Notes, Contents, Synopsis, Lexile, Level or PRC fields.

Just type in the word or words to search for then press <Enter> or click on the Search button.

A list of titles found by the search is then displayed immediately.

**Advanced Key Word Searching: Boolean Searching – And, Or, Not**

Webopac and Search recognize AND, OR, and NOT as special commands rather than searchable words. If these appear between the other words, they alter how the words are treated by the search. (If they appear at the beginning or end, they are treated as words.)

AND means that both words (on either side of AND) must both be present for an item to be found. The words do not have to be next to each other and they can even be in different fields – they just have to be present somewhere in the data of that record. AND is also the default if it is omitted between words. It narrows search results. ENERGY AND SOLAR and SOLAR ENERGY both give the same results.

OR means either or. If either word is in an item's data, it is found by the search even if the other word is not present. Example: FOOTBALL OR CRICKET finds everything with either the word Football or the word Cricket present, even if only one of the words is there but not the other.

NOT is used to omit things if they are present. ENERGY AND SOLAR NOT NUCLEAR will search for Solar Energy but it will exclude anything that has the term Nuclear even if the others are present.
Nearest Word Searching – "Fuzzy logic"

Bookmark automatically adjusts words behind-the-scenes so variations are included. Searching for Otters also finds Otter, Reading includes Read. It does not cover Mouse and Mice, however. To avoid confusion, Author names are not adjusted but searched for 'as is'.

Advanced Key Word Searching: Truncated Word Searches

The special * (asterisk) character allows "truncated word searching". Words starting with the letters before the asterisk are found. STR* will find all entries having words starting with the letters STR.

Advanced Key Word Searching: Stop Words and Punctuation

Stop words are words ignored in searches.

By default, Bookmark includes all words. None are ignored.

The stop word list can be changed in Controls / Stop Words. Once changed, Reindex Words in Cataloguing is required to fully readjust the search indexes.

Punctuation symbols are automatically removed. The special symbols * ( ) and " are used for commands.

Advanced Key Word Searching: Brackets

Brackets can be used to group words in searches.

Example: dogs or (cats not otters)

Advanced Key Word Searching: Phrases

Double quote marks can be put around groups of words to identify a phrase.

All cats without the quotes returns many items but "All cats" returns only items with those two words together in that order.

Search Limiting

Sometimes it is necessary to search for certain types of resources - e.g. videos or items in a particular location such as an office.

By default, searches automatically include everything from all item types and locations. However, searches can be automatically restricted to exclude certain types, locations and statuses. See the Search Limiting section in Controls / Search Controls.

A hidden command can also be used to search for everything regardless of automatic restrictions. Type a + symbol at the start of the search. +Space Travel will include all item types and locations even if they are automatically restricted. This hidden command can be offered to users on a need-to-know basis.
Title Searches

Searching based on titles only is similar to Key word but with one extra option: *Type of Search*.

**Title Search**

*Type your search below then click on the Search button to start.*

![Search Form]

*Advanced search limiters*

- **Type of search:** Words anywhere
- **Limit to item type:** Any item type
- **Limit to location:** Any location

The *Type of Search* option list allows searching by

- Words anywhere in the title
- Title begins with

*Type of Search* offers users two strategies.

The Words anywhere type search is identical to Key word in all aspects, including Boolean terms, wild cards and stop words, but is restricted to examining Titles and Subtitles field only.

A *Begins with* search returns items that have terms in which the field starts with what is entered. Entering SPA returns items in which titles begin with the letters SPA. The asterisk symbol is not used for Begins searches (they are ignored), only word style. If the search terms are not found, entries starting with the nearest matching three beginning letters are displayed. Begins searches are therefore more tolerant of misspelling than Word style searches. SPAX, for example, returns everything starting with SPA.

Back to Search Menu
Subject, Author and Series Searches

Searches made for subject, series and author all operate identically. The same rules and strategies used for Title searches apply as well, however these searches are restricted to just the subjects, or authors or series fields.

The main difference is that these searches first return a list of subject, author or series entries before showing titles.
One or more of those is then selected to view the items.

*View All* displays all titles for all entries.

Controls / Webopac Controls includes a setting that shows all titles directly from the authority search without the intermediate list of subjects, authors or series.

**Genre Searches**

A "genre" search can be added using a checkbox in Webopac Controls. By default this is hidden.

The droplist shows all Genre headings in the authority list. Selecting one immediately searches for that heading.

Genre headings will also appear in normal subject searches, too, and can be spotted by their + prefix.
Cross References: SEE and SEE ALSO

Authority-based searches also offer cross-references, if these are present in the authority list. These are shown above in red and green and contain the words SEE or SEE ALSO.

SEE references direct users to more correct terms. (Green)

SEE ALSO references direct users to related entries. (Red)

In both cases, if selected, the heading which appears after SEE or SEE ALSO is used instead of the heading on the left side.

"Space flight SEE ALSO Astronomy" redirects to Astronomy and lists titles with that heading.

"Space flight to the Moon SEE Space flight" redirects users to the correct term Space Flight.
Titles Found by Searches

Items found by the search are listed on the “Search Summary” page.

There are two different presentations available which are set in Webopac Controls: Columns or Rows. Below is the Rows format.

Clicking on the title or cover image opens details about the item.

Click on the arrows at the top to go to the next page or previous page. Clicking on a page jumps to that page number.

*Add to bookbag* adds the item to the temporary bookbag.

*Bookbag* accesses the Bookbag feature. (See below.)

*Sort by* allows changing the order of the results.
Item Details

Selecting an item opens the Item Details page.

Catalogue Details

The amazing story of Adolphus Tips
Michael Morpurgo; Illustrated by Michael Foreman.
Classification: F MOR
ISBN: 0007182457

Synopsis: A heartwarming tale of courage and warmth, set against the backdrop of the second world war, about a cat who survives against the odds. Something's up. Something big too, very big. At school, in the village, whoever you meet, it's all anyone talks about. It's like a sudden curse has come down on us all. It makes me wonder if we'll ever see the sun again. It's 1943, and Lily Tregenze lives on a farm, in the idyllic seaside village of Slepton. Apart from her father being away, and the "townies" evacuated at school, her life is scarcely touched by the war. Until one day, Lily and her family, along with 3000 other villagers, are told to move out of their homes -- lock, stock and barrel. Soon, the whole area is out of bounds, as the Allied forces practise their landings for D-day, preparing to invade France. But Tips, Lily's adored cat, has other ideas -- barbed wire and keep-out signs mean nothing to her, nor does the danger of guns and bombs. Frantic to find her, Lily makes friends with two young American soldiers, who promise to help her. But will she ever see her cat again? Lily decides to cross the wire into the danger zone to look for Tips herself. Now, many years later, as Michael

To reserve the above item, enter your barcode below then click on the Reserve button:

Write a Review
Power Search

A Power Search can be used for more advanced searches. It allows up to four different fields to be tested at the same time as well as the additional fields of Call number, ISBN, Publishing, Notes, Lexile and Level.

Items are found containing the data entered in the specified fields.

A “link” must be used to connect each search line. This can be and, or or but not.

Websites, Goodreads and Author Links

Bookmark allows cataloguing electronic resources such as websites, weblinks, ebooks, documents and other resources available on the local network or Internet. See the Cataloguing document for details on how to catalogue these resources. Webopac allows linking directly to any valid Internet or Intranet URL. Correct item types and icons help users.

*If an item has a yellow W icon next to it, it is a website.*
To link to the website or on-line resource, either click on the website item type icon, or click on the cover image or the title.
To open the website or weblink, click on the Open Website button.

If the item's URL contains the term "goodreads", it is assumed to be a link to a Goodreads entry for the book. The button on the Item Details page then says "Goodreads" instead of Website.

If the author's website has been entered into the Author Authority List in Cataloguing, the button "Author" appears offering a link to that website.

Note: non-website electronic resources – such as videos, pdf's, images – can also be accessed. These are called "shortcuts". Their address will be a location on the local network. There is, however, a limitation on the types of files which can be accessed via Webopac. (Windows Search does not have this limit.) The limit is imposed by Internet Browsers themselves: Internet Explorer, Edge, Firefox, Google Chrome, Safari, Puffin. They do not allow executable files to be opened. Other types of files may be blocked, too, unless the browser contains an extension or add-on.
Book Reviews

Two settings in Webopac Controls allows the Book Reviews feature to be available.

- Read Book Reviews
- Write Book Reviews

The first allows users to read reviews but not write any. The second activates writing of reviews as well.

Note: writing reviews also depends on the user's computer logon permissions. If the user has read-only access, then writing reviews is automatically blocked even if this switch is set. Read-write access is required to write reviews, make reservations and any other activity involving saving data.

When a search is performed, any items that already have a review are marked. In the Row format the word Reviews appears.

In Column format, a + symbol appears next to the title.

Click on the title or cover to view Details and read reviews.
To write a review, enter the user's barcode and click on Write a Review button.

Note: only reviews that are approved can be viewed. Approval is made in Reviews Controls.
Reviews Controls are covered in the Search manual.
Bookbag and Resource lists

The Bookbag is a temporary list of items collected by a user from their searches.

A Resource List is a more permanent list and is created from the Bookbag.

Using the Bookbag

Items found in searches can be placed into the Bookbag. Click on the Add to Bookbag link next to a title to add.

Many searches can be performed and items added to the Bookbag.

To view the collected list, click on the Bookbag icon on the Search menu or the Bookbag button on the bottom of the titles list screen.

The Bookbag is available on the computer on which it is made. Shifting to another computer will not list the same Bookbag contents.

The Bookbag can be hidden by making the menu button invisible in Webopac Controls.

To see an item's details, click or the title.

Remove can be used to remove an entry from the list.

Clear bookbag empties the entire Bookbag.
Resource lists

Resource Lists are more permanent.

Borrowers may have one or more resource list.

Items collected into a Bookmark can be transferred into a Resource List. To do this, click on Resource Lists.

Access Resource List

To access an existing Resource List, choose it from the dropdown list then enter your barcode and the list password.

To create a new Resource List, enter its new name in the Create List name box and your barcode and a password for the list. A barcode and password are not needed for open lists.

Choose resource List: [Create new resource list] 

Create New List name: 

Barcode: 

Open resource list

A new Resource List can be created or an existing list can be accessed.

To open an existing list, use the dropdown list.

To create a new list, type in the list's name next to Create New List name. This is the name that will appear in the drop list, not the name which may be displayed publically. It is also the name which appears in Manage Resource Lists in Search Controls. The name always appears as upper case.

Also, enter the user's barcode.

IMPORTANT! Contents of the Bookbag are not automatically transferred into the opened Booklist. Click on the Add from Bookbag link to do this.
There are three types of resource lists:

*Private*
Private lists are the default type. They require a borrower number or barcode to be accessed. Private lists are not visible in the public Resource Lists button on the Search menu.

*Public*
A public list is available for others to view via the *Resource Lists* button on the Search menu. To make a list public, give it a title then click on Submit.

A public list cannot be changed by anyone other than its owner.

*Open*
The Open Resource List is one which must be created by an authorized borrower but once created can be viewed and amended by anyone from a Bookbag containing items. Items can only be deleted by the originator of the list or the librarian in Manage Resource Lists in Controls but anyone can add to the list.
Your Details

The *Your Details* icon allows borrower searches. This button can be hidden in Webopac Controls.

Display a list of items on loan to you and items previously borrowed.

Enter your barcode here --

Enter your security code here --

Display

Enter or scan the borrower’s full barcode or their number.

If the “borrower password” function is switched on, then the borrower’s privacy code or the librarian’s password must be entered as well.

Click on the *Display* button to see the borrower’s details.

For privacy reasons, borrowers cannot be searched for by name. A barcode or borrower number is required.

Click on the underlined barcode number of an item to see its cataloguing details.

If a photo of the borrower is available, it may be displayed. Photos can be turned off in Webopac Controls.

Search
New Items

The New Items link displays a title list page of all items in the New Items list, which is set up in Controls.
User Links

Up 21 special links can be added to the Search Menu. These appear beneath the other icons.

Search Library Catalogue

Step 1: Type your search here

Step 2: Select area To search
- Keyword
- Title
- Subject
- Author
- Series

Step 3: Click on the Search button To start

Narrow search by...
- Search type: Words anywhere
- Any item type: Any type
- Any location

In Webopac Controls, click on the User Links button.
Each link requires a name that is displayed beneath the icon, a complete URL address, and an icon.

The Link Name is normally displayed on one line. To force it to be split, add <br> - e.g. Robert<br>Silverberg. It will then appear as two lines.

![Robert Silverberg](image)

**Icons**

You can add your own icons to use with User Links by saving image files to the folder Webopac in Bookmark's location.

The files can be of jpg, gif, png or bmp type.

A normal icon measures 32 x 32 pixels in rectangular size. Images of different sizes are resized to fit but it is recommended to stick to this size if possible.

All image files in the Webopac folder are available to choose from for User Links.
The steps to perform a search vary slightly with each Style. Presentation 1 requires more pages to enter a search than the others.
### Titles listed in Row format

**100 Things you Should Know About Big Cats**
- **Author:** DE LA BODIVERE, Carole
- **Classification:** L17.75 Cat
- **Series:** 100 Things You Should Know About

Custom Designing Your Own Webopac Search Page

In addition to the built-in presentations, Webopac also allows for a custom-designed start page.

Knowledge of HTML coding is necessary.

The first step is to create a temporary page that can then be altered.

Go to Webopac Controls. Choose a Setup. Select Custom presentation. Click on Update. A page called "Opac.htm" is created at Bookmark's location. Use the HTML code in this page to create the custom page. The filename of the custom page should be opac.htm (for the default setting).

The custom page can be accessed either via the Bookmark webserver or another webserver like IIS. For the Bookmark webserver, the URL is something like http://bmsserver/Opac.htm

The basic page uses Presentation 2.

Search Entry

Entering searches requires a Form statement:
<form action="bmopac.exe" method="get">
<input type="hidden" name="send" value="search">
<input type="hidden" name="task" value="search">
The Input statement used to enter search text must contain the name "searchfor":
<input type="text" class="a14blue" name="searchfor" size="65" maxlength="100">
The name identifies the field: keyword, title, subject, author, series, contents, notes and barcode.
<input type="image" src="images/magnify.gif" name="keyword" width="40" height="40">
The lines can be entered:
<!-- SEARCH LIMITING -->
<!-- OTHER FUNCTIONS -->
<!-- USER LINKS -->

These identify where code for search limiting and other functions and user lines will be added when the Update button is clicked. Omit any of these to not show that function.

The following code generates a basic search page using a dropdown list to select the field.

<!DOCTYPE HTML PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN" "http://www.w3.org/TR/html4/loose.dtd">
<html>
<head>
<title>Bookmark OPAC</title>
</head>
<body>
<form action="search" method="get">
<input type="text" name="searchfor" size="35" maxlength="50">
<Select name="field">
<option value="keyword" selected>Keyword</option>
<option value="title">Title</option>
<option value="subject">Subjects</option>
<option value="author">Authors</option>
<option value="series">Series</option>
</Select>
</form>
</body>
</html>
Note: changing the Presentation to 1, 2, 3, 4 or 5 does not remove the custom design. The page will remain in place unless it is deliberately deleted.
